Commentary to Recommendation CM/Rec(2014) 3 of the Committee of Ministers to member States concerning dangerous offenders

Introduction

1. In 1982, the Committee of Ministers of the Council of Europe adopted the Recommendation No. R(82)17 concerning the custody and treatment of dangerous prisoners. Since, there has been a clear need to replace this recommendation with a new text in line with new international and Council of Europe standards, including those regarding the treatment of offenders in custody and the European Prison Rules. The text of the new recommendation aims at building upon and further broadening the scope of Recommendation No. R(82)17 and at giving policy guidance to national authorities on the main rules to follow when dealing with dangerous offenders.

2. The main objective of the recommendation is to strike the right balance between the protection of public safety and the rights of offenders, particularly in relation to secure preventive detention. Indeed these considerations have been given further weight by several European Court of Human Rights (ECtHR) judgments, of which only two will be mentioned here:

3. In the case of Maiorano and others v. Italy (application no. 28634/06, judgment of 15 December 2009), the Court made it clear that the state had an obligation to protect its citizens from dangerous offenders. The state does not only have the primary obligation to ensure the right to life by putting in place specific penal legislation, but also in certain well defined circumstances, Article 2 of the European Convention on Human Rights (ECHR) may require a state to take positive preventive measures aimed at protecting a person whose life is threatened by the criminal activity of others. This obligation arises only in cases where the authorities knew or should have known of the existence of a real and immediate danger for the life of one or more persons.

4. The case M. v. Germany (application no. 19359/04, judgment of 17 December 2009), on the other hand, concerned the rights of the offender in relation to secure preventive detention. It stated that the replacement of preventive detention of determinate duration (10 years maximum) by preventive detention of indeterminate duration, following a change in German law, amounted not to a mere amendment of the enforcement of this penalty but to an additional penalty imposed retroactively (Art. 7, § 1). Furthermore, if a court responsible for the execution of the sentence orders preventive detention after the original court conviction of the sentencing court, this latter decision does not satisfy the requirement of conviction for the purpose of Article 5, § 1 (a) of the ECHR as it no longer involves the finding of guilt.

5. In relation to the case M. v. Germany, two aspects of this judgment should be further observed: Article 7 of the ECHR embodies, *inter alia*, the principle that only the law can define a crime and prescribe a penalty (*nullum crimen, nulla poena sine lege*) and it also lays down the principle that the criminal law must not be extensively construed to an accused's detriment, for instance by analogy; an individual must know from the wording of the relevant provision what acts and omissions will make him or her criminally liable and what penalty will be imposed for the act committed and/or omission. On the other hand the ECtHR concludes that preventive detention [under the German Criminal Code] is to be qualified as a “penalty” for the purposes of Article 7 § 1 of the ECHR.

6. Against this background of ECHR case law, it is currently the experience in Council of Europe member States that although procedures surrounding secure preventive detention have become stricter, the category of “dangerous offender” has at the same time been broadened to include even more individuals. This problem required the Ad hoc drafting Group on Dangerous Offenders to focus closely on two primary tasks: firstly to work hard on a narrow definition of “dangerous offender” in order to characterise more precisely this group of offenders; and secondly to consider how best to recommend management and treatment of dangerous offenders that balance the offender’s rights and the protection of the public.

7. The recommendation acknowledges that “dangerousness” is not a clear legal concept. It is also vague in scientific terms, in so far as the assessment of criminological dangerousness and individual risk of
reoffending in the long term lacks sufficient supporting evidence to ensure an accurate measurement of dangerousness.

8. In order to strengthen the use of the concept of dangerousness in this particular context, the recommendation has particularly stressed the importance of risk assessment and risk management to reduce risk and uphold proportionate durations of detention. With this emphasis on assessment and management procedures, it will hopefully be possible to counter situations where for instance an offender is detained for an indeterminate period due to a categorisation of dangerousness, even though the risk posed by the offender may have diminished in the meantime. The recommendation therefore also regards assessment and management procedures as interrelated, because they have to be repeated at suitable intervals and must adjust to each other when changes in the offender’s situation occur.

Decision-making process

9. As mentioned above, the treatment of long-term and ‘dangerous’ offenders is becoming an increasingly important issue in many Council of Europe member States, and thus for the European Committee on Crime Problems (CDPC), with concerns on a number of different levels.

10. Therefore, following the conclusions of the 14th Conference of Directors of Prison Administration (CDAP), (Vienna, 19-21 November 2007), the Council for Penological Co-operation (PC-CP) decided to carry out a study on the concept of dangerous offenders.

11. In June 2009, the Ministers of Justice of the Council of Europe invited the CDPC in co-operation with other competent bodies of the Council of Europe to examine existing best practices in member States, in full respect of human rights, related to:

- the assessment of the risk of reoffending and the danger to victims and society posed by perpetrators of acts of domestic violence;
- the supervision and treatment of such perpetrators in serious and repeated cases, in closed settings and in the community, including surveillance techniques;
- programmes and measures aimed at helping perpetrators improve self-control and behaviour management and, where possible, repairing the harm done to victims.

12. The PC-CP considered this resolution at its 62nd meeting (21-23 September 2009) and shared the opinion of the CDPC Bureau that this study should be carried out within the framework of the planned study on the concept of dangerous offenders and their supervision and treatment.

13. A report was drafted by Professor Nicola Padfield entitled “The sentencing, management and treatment of ‘dangerous’ offenders”, which was presented to the CDPC at its meeting on 7 June 2010. It describes the situation in Europe and explains the possible risks and dangers should there be a misbalance between the public interest and the need to safeguard against the abuse of individual rights.

14. A roadmap setting out the work of the CDPC in the field of dangerous offenders was submitted to the CDPC in December 2011 where the decision was taken to prepare draft terms of reference for a restricted drafting group of experts on dangerous offenders.

15. In March 2012, the Bureau of the CDPC approved the above-mentioned draft terms of reference and instructed the Secretariat both to send them to all CDPC delegations for approval by written procedure and to submit them to the Committee of Ministers for adoption.

Terms of Reference

16. On 21 November 2012, the Committee of Ministers adopted the terms of reference of the Ad hoc Drafting Group on Dangerous Offenders (PC-GR-DD). Under the authority of the CDPC, the PC-GR-DD was requested to prepare a non-binding legal instrument on dangerous offenders.

17. The PC-GR-DD was required, in particular, to examine the following issues:

• risk and threat assessment of dangerous offenders in criminal proceedings which could result in detention due to the danger posed by the offenders;
• treatment and conditions of detention of dangerous offenders;
• measures for the prevention of reoffending by dangerous offenders to the extent that such measures are covered by the criminal justice system.

18. The term of dangerous offenders to be worked on was clearly delineated in the terms of reference as follows:

19. The work of the PC-GR-DD should focus on offenders deemed to represent a threat to society because of their personality, the violent character of the criminal offence(s) which they have committed, and the risk of reoffending.

20. Offenders whose level of danger is determined by their involvement in organised crime and/or terrorism would not be covered by the PC-GR-DD, but be the subject of future work by the CDPC.

21. The terms of reference of the PC-GR-DD specify that “Other issues related to dangerous offenders, in particular with regard to offenders whose dangerousness is determined by their involvement in organised crime and/or terrorism, should not be examined as a matter of priority by PC-GR-DD, but shall be the subject of future work by the CDPC”. In fact, with this type of dangerous offenders come specific demands, in particular as far as questions of security and public order are concerned: the development of phenomena such as violence and/or proselytism in prisons needs to be avoided; when necessary, these dangerous offenders should be detained in penitentiary establishments located far from places where criminal organisations have a strong presence; these dangerous offenders should not be able to carry on with their criminal activities while in detention (for example they should not have the opportunity to transmit orders to their accomplices on the outside). As a result, the specific objectives relating to prevention and security should be carried out through additional work under the aegis of the CDPC.

22. The expected results were the drafting of a non-binding legal instrument concerning dangerous offenders. This entailed a draft Recommendation and its commentary addressing the guiding principles for the application of the Rules, as well as explanations that would enhance the understanding and use of the Rules.

23. The terms of reference required the PC-GR-DD to have completed its work by December 2013.

Composition of the Committee

24. The Ad hoc Drafting Group was composed of 16 representatives of member States with the aim of reflecting an equitable geographic distribution amongst the member States.

25. It consisted of representatives from Belgium, Croatia, Czech Republic, Denmark, Finland, France, Germany, Greece, Italy, The Netherlands, Norway, Poland, Russian Federation, Switzerland, Turkey and United Kingdom. Other participants (Austria) took part at the meeting at their own expenses. Mr Sławomir Buczma (Poland) was elected Chairman of the Committee.

26. Ms Louise Victoria Johansen was appointed as scientific expert to assist the Ad hoc Drafting Group. Moreover, drafter consultants, Ms Yvonne Gailey and Professor Carlos María Romeo-Casabona, were appointed with effect from the 1st restricted meeting of the Group. Representatives from the European Committee for the Prevention of Torture and inhuman or Degrading Treatment (CPT), the Council for Penological Co-operation (PC-CP) as well as Penal Reform International participated in the Committee's meetings as observers.

Working methods

27. The first meeting of the Ad hoc Drafting Group was held in December 2012 and began with a roundtable presentation of the policies and legislation in each representative’s country regarding dangerous offenders. The Group discussed basic principles, scope and definitions concerning dangerous offenders and focused on the possible structure of the draft recommendation. Considerations were also made on the issue of existing practices, risk assessment and management. Proposals for common standards regarding these measures were also discussed.
28. In addition, the relevant case law of the ECtHR and the best practices of member States were taken into account. A representative from the ECtHR was invited to make a presentation of the ECtHR case law in relation to secure preventive detention, particularly the case M. v Germany (also M., K., S. v Germany) (application no. 19359/04, judgment of 17 December 2009).

29. The Group also consulted the above-mentioned report of Professor Nicola Padfield commissioned by the CDPC. However, in the draft commentary, no attempt was made to present an exhaustive presentation of all the variations between Council of Europe member States that do (or do not) have a particular policy or practice concerning dangerous offenders.

30. The Ad hoc Drafting Group held its second meeting in April 2013, where the preliminary draft recommendation was presented. Each rule was examined and commented upon by the representatives of member States. Core definitions and principles of the future recommendation concerning “dangerous offenders”, “treatment”, “secure preventive detention”, “preventive supervision”, “risk assessment” and “risk management” were discussed and agreed upon. It was decided at this point that the recommendation should not apply to children and persons suffering from a mental disorder who are not under the responsibility of the prison system. The PC-GR-DD decided to present a draft commentary at its next meeting, and this commentary was then developed by the scientific expert and the drafter consultants.

31. The Ad hoc Drafting Group held its third meeting on 18-20 September 2013, where the draft commentary was presented. The draft recommendation and its commentary were examined and approved by the CDPC during its 65th Plenary meeting held from 2-5 December 2013, before their transmission to the Committee of Ministers for adoption.

32. The PC-GR-DD’s work resulted in a draft Recommendation concerning dangerous offenders and a draft report containing elaborations and explanations of the Rules.

Commentary to the Preamble

33. The Preamble makes reference to a list of relevant Recommendations expressing fundamental Council of Europe principles that should guide the interpretation and implementation of the rules of this Recommendation.

34. The Preamble underlines that national legislation, policies and practice are addressed by this Recommendation. This means that the Recommendation offers a guide for both legislation and a framework for good practice concerning dangerous offenders. This does not mean, however, that the Recommendation offers an exhaustive guide on every aspect of daily practices concerning this group. It is for the different Council of Europe member States to accommodate these rules into their legislation and to translate them into practice.

Part I - Definitions and basic principles

Definitions

35. The definition of “dangerous offender” is central to determining the scope of application of the Recommendation. Rule 1a reflects the intentions of the Ad hoc Drafting Group to define narrowly the term “dangerous offender”. It establishes that only very serious sexual or very serious violent crime against person(s) falls within the scope of this Recommendation. The term “very serious sexual or very serious violent crime” in this context refers to an indictable offence that is punishable by a high level of imprisonment penalties according to each specific national criminal code. The Ad hoc Drafting Group took note of the fact that Council of Europe member States apply quite different mechanisms when dealing with the phenomenon of dangerous offenders and that many states have developed different concepts of what may be considered to be forms of “secure preventive detention” and/or “preventive supervision”. Member states’ legislation also differs in respect of the type of offence to which such measures may be applied2. Therefore, this recommendation is neither intended to oblige member States to introduce measures of secure preventive detention or preventive supervision into their national law nor is it intended in any way to impose - or even to propose - any limitations in respect of the types of offences in which member States may apply mechanisms of secure preventive detention and/or preventive supervision. Nevertheless, whenever a member state does apply such mechanisms to deal with the phenomenon of “dangerous offenders” it should take into account the rules contained in this recommendation.

2 PADFIELD, N, op.cit. paragraph 95-98, pag. 27-29.
36. The concept of “high likelihood” is not defined by legislation and will be for the court to assess in each case, supported by expert reports. However, the use of “high likelihood” in this Recommendation underlines the importance of considering both the seriousness of the offence and the likelihood of its (re)occurrence (Padfield 2010:10). An offender having committed a very serious sexual or very serious violent crime may in some circumstances represent a low likelihood of reoffending and should not necessarily be dealt with under the definition of “dangerous offender”.

37. This definition takes into account that “dangerousness” should be considered as a dynamic, and not a static, concept. The degree of dangerousness can change over time: it may increase, diminish or even cease.

38. It is important to stress that the definition of “dangerous offender” is valid only for the purposes of the application of this Recommendation, and it does not require a Council of Europe member State to introduce a definition of dangerous offender in its national laws.

39. The definition of violence is inspired by the World Health Organization (WHO). According to the WHO, violence includes “the intentional use of physical force or power, threatened or actual”. The term “threatened” refers to the intended use of violence whether or not it causes harm to the victim. The mere consideration of committing an act of violence is not enough to meet the term “threatened”, whereas an act, expressed intent or implementation is. The WHO definition includes reference to groups and community. It may be that in addition to serious crime against the person a particular group is also targeted in, for example racist, sexist, homophobic attacks, etc.

40. See also Rule 36 above as regards the concept of “high likelihood”.

41. This definition mentions intervention measures in “custodial and community settings”, referring to situations, among others, in which the offender may have been given leave for a shorter or longer period, maybe as a step towards conditional release, under which he or she may in fact be in a community setting, although intervention measures are still applied.

42. For the purpose of this Recommendation, a distinction is made between the terms “intervention” and “treatment”. Intervention in this context refers to efforts aimed at reducing the risk of reoffending through a range of possible measures as listed in Part IV on Risk Management.

43. Treatment is more broadly defined and applied in this Recommendation than “intervention”. Treatment may address the health or well-being of the offender, regardless of whether the treatment undertaken is related to the reduction of risk.

44. Treatment refers to a range of medical, psychosocial and/or social services offered to offenders, and it is aimed at improving the physical, psychiatric and/or social dimension of the offender’s life.

45. In many European countries there are specific rules regulating the detention of dangerous offenders for public security reasons. For the purpose of this Recommendation, secure preventive detention is considered to be a measure for public protection and not solely a penal sanction. Secure preventive detention may be of a fixed term but more often is of indefinite duration. It should always be ordered by the sentencing court, as stated in more detail in Part II on judicial decisions for dangerous offenders.

Scope, application and basic principles

46. Children, understood as persons less than 18 years of age, are not included in this Recommendation, and should be dealt with under a different set of arrangements than adult offenders. Children are instead seen to be addressed by the Recommendation Rec (2008)11 on European Rules for juvenile offenders subject to sanctions or measures, the Guidelines of the Committee of Ministers of the Council of Europe on child-friendly justice3 and Article 40 of the United Nations Convention on the Rights of the Child.

47. In the Recommendation, the reference to dangerous offenders with a mental disorder only applies to persons who are under the responsibility of the prison/justice system. The Committee considered whether dangerous offenders with a mental disorder should be addressed in the Recommendation. This was regarded as being problematic since persons with a serious mental disorder should not be subject to imprisonment but be treated in other regimes such as psychiatric hospitals. At the same time, it was

3 Information about the Council of Europe’s work on child-friendly justice and its progress is available on the website: www.coe.int/childjustice
acknowledged that many dangerous offenders who are under the responsibility of the prison/justice system do suffer from some personal or developmental disorder and are in need of treatment during imprisonment and possibly after eventual release. The Recommendation addresses the risks, needs and rights of dangerous offenders with such a mental disorder.

48. Dangerous offenders can be facing conditions that are particular for them as a group. This may include indefinite detention, treatment and surveillance measures for the protection of the public.

49. In particular, secure preventive detention poses significant human rights concerns, because the offender is detained, beyond the period prescribed for punishment, because of the risk that he or she is perceived to present in the future. The protection of the rights of dangerous offenders in the imposition and implementation of secure preventive detention and preventive supervision remains fundamental.

50. At the same time it is recognised that public safety is an obligation of nation states⁴, and the protection of the public should be balanced with the protection of human rights of offenders classified as dangerous.

51. Measures that limit personal liberty require the decision of the judicial authority. In other cases, other competent authorities may be involved in imposing the restriction on the offenders, as in the case of prison authorities when taking decisions relating to internal prison conditions and limitations. Decisions of this kind that are not within the scope of a judge’s power should at least be subject to judicial review.

52. This rule also addresses proportionality principles. The ECtHR has noted that throughout the ECHR there is a search for a fair balance between the demands of the general interest of the community and the requirements for the protection of the individual’s fundamental rights. Such a fair balance is struck by the principle of proportionality. Proportionality can apply to many situations and is most commonly associated with the balancing exercise in determining claims under ECHR rights that permit the state’s lawful interference in certain circumstances. Proportionality requires that decision-makers must balance the severity of the interference with the intensity of the need for action, taking into account the suitability, necessity and proportionality stricto sensu of the restriction of the rights involved. All the three mentioned conditions should be fulfilled if personal liberty is to be limited.

53. Limitations placed upon an offender’s protected rights should only be imposed if they are in accordance with the national law, and are intended to achieve a legitimate objective, for example treatment, safety of the individual, or safety of others.

54. This rule underscores the importance of a restricted identification of dangerous offenders to ensure that only those exceptional cases that merit special measures are so identified. This identification should rely on comprehensive risk and needs assessments as described later in the Recommendation.

55. The reference to “a small minority of the offender population” refers to the ideal of restricting the number of offenders classified as “dangerous” to the minimum necessary. It does not presume to suggest how many dangerous offenders should be present in any one prison.

56. In some systems, a label of dangerousness is automatically imposed on offenders with a long-term sentence regardless of the nature of the offence. Equally, general recidivism is sometimes regarded as aggravating in itself and therefore “dangerous”. Contrary to this approach, this rule stresses that specific characteristics of an offender’s serious criminal behaviour combined with an assessment of the likelihood of similar reoffending are necessary to lead to a classification of “dangerousness”. Dangerous offenders should be very narrowly defined as a specific group.

57. The following elements may be used to define such criteria:

- a. the nature, seriousness and pattern of the offender’s behaviour in the past;
- b. characteristics of the offender that are problematic, persistent and pervasive which contribute to continued and substantial risk to persons;
- c. the degree to which such characteristics may or may not be amenable to change;
- d. the presence or absence of any positive or protective factors to counterbalance these characteristics;

⁴ E.g. ECHR case law, Maiorano v Italy (application no. 28634/06, judgment 15 Dec 2009).
e. the likelihood that without exceptional measures the offender will commit very serious sexual or very serious violent crimes against person(s);

f. the extent to which exceptional measures are needed given:
   i. the provision of intervention in the past;
   ii. the efficacy of intervention in the past;
   iii. the response to and compliance with intervention that has been provided in the past.

58. The issue of economic resources was raised in connection with the assessment of dangerousness. Concern was voiced about the often very high cost of making a thorough assessment involving psychiatrists, psychologists and other professionals, just as this process may take a long time. The importance of defining the targeted group “dangerous offenders” very narrowly in order to avoid flooding of the criminal justice system with risk assessments thus also has an economic dimension.

59. Dangerous offenders often serve long sentences and/or secure preventive detention. They should be offered a structured regime of activities such as work, education and other meaningful activities as well as access to psychosocial support to make the time spent in prison more constructive. These activities may also help eventual reintegration into society after imprisonment or detention with due regard of the necessities of this group.

60. Balancing the rights of the prisoner on the one hand and the protection of society on the other lies at the heart of this Recommendation. That being said, there is reason to underscore that to a wide extent the rights of the prisoner and the obligation to protect the society are in fact two sides of the same coin. As an example preparation for release can be mentioned. This is important not only for the prisoner, but for the protection of society; as it will diminish the risk of reoffending/recidivism.

61. Preparation for release does not only encompass education, vocational training, interventions because of psychiatric problems, etc. Contact with the outside world is also of high importance in this regard. Being released to society directly from a high-security prison is extremely difficult for a long-term prisoner and should, hence, be avoided also in the interest of the protection of the society.

62. A plan should evidence an appropriate balance of measures depending on the risks and needs of the individual. Although it may seem difficult in some cases, safe reintegration in the community is the aim, and this is promoted through application of sufficient rehabilitative measures. However, given the level of risk posed by such individuals, restrictive measures also need to be appropriately applied to reduce the likelihood of reoffending. This rule reinforces the fair balance referred to previously; it addresses the offender’s right to the prospect of eventual reintegration; it also explains that a well-planned pre-release phase is necessary to reduce risk in the community afterwards. This rule requires the continuity of risk management between custody and community whether on eventual release or during short periods of leave as preparation for release.

63. Victims can have particular issues with the offender’s reintegration into society. Steps should be taken to protect victims from threat, or fear, as well as to take into consideration their sense of justice. For instance, close consideration should be given to geographical proximity to victims, and where this is seen to be an unavoidable scenario, the risks inherent in it need to be carefully managed.

64. Where appropriate and possible, the victim (and the offender) should be offered restorative justice meetings and/or dialogue.

65. While dangerous offenders may face measures specifically targeted at managing the risk of danger they pose, this should not justify detaining dangerous offenders under harsher or different conditions than other offenders. Detention conditions and levels of security in prison should correspond with the actual level of risk posed by the dangerous offender inside prison, and be guided by Rule 34 in this Recommendation. Given the stress associated with indefinite detention, dangerous offenders may have specific problems that should be addressed by staff or even by the judicial authority.

66. Prohibition of discrimination in the execution of sentences imposed upon dangerous offenders is also relevant to the provision of treatment and interventions. Offenders have been found to have been discriminated against on grounds of their foreign nationality in the interventions offered to them in order to reduce dangerousness. One example in ECHR case law concerns an applicant who was not allowed to participate in a necessary therapy because of an expulsion order against him. He could not, therefore, be prepared for a life without crime in the defendant country in the course of the
member States concerning foreign prisoners, notes that foreign prisoners may be less likely to receive
treatment programmes than other prisoners, and states that they should generally not be restrained from
participating in such activities.

67. Furthermore, the increasingly ethnically diverse population within Council of Europe member States
makes it particularly important to address specific minority issues. Minority status can influence both the
needs of different ethnic or linguistic minority groups, and specific reactions to treatment. Specific measures
might be necessary for some minority offenders, although these needs will vary across particular groups or
individuals. Most importantly, these minority offenders should not be regarded as less suited to, or worthy of,
treatment and training, just because of their status as a minority.

68. The Explanatory Memorandum to Rec No. R (92) 16 of the Committee of Ministers to member States
on the European Rules on Community sanctions and measures defines discrimination as the unjust or unfair
exercise of discretion on the base of race, skin colour, ethnic origin, gender, nationality, language, religion,
political or other opinion, economic, social or other status or physical or mental condition. This does not mean
that all offenders should be treated identically. Rather, each individual’s specific needs, problems and
situation may require different treatment or interventions.

69. Because of the significant and enduring consequences of the classification as a ‘dangerous
offender’, it is essential that assessments that inform such decisions, measures taken to minimise risk and
imprisonment conditions are subject to regular and independent inspection and monitoring. In particular, the
conditions and duration of secure preventive detention should be subject to inspection and review.

70. Those detained as dangerous offenders should have access to independent legal advice regarding
the measures imposed upon them. Dangerous offenders are very dependent on the procedures that
establish the risk that they pose. They should be able to challenge the basis of the assessments used to
justify their detention.

71. It is likely that dangerous offenders will present a complex and challenging range of risks and needs:
for example, the co-existence of antisocial personality patterns or disorder, psychopathy, substance abuse
problems or disorder, other mental disorders, cognitive impairments. Such specific needs that have been
identified during assessment require appropriate treatment or interventions in order to reduce the level of risk
posed and the resources to provide those should be made available.

72. Specific needs could also emerge because of the effects of a long-term or indefinite imprisonment
period. In Recommendation Rec(2003)23 on life-sentence and other long-term prisoners, Rule 21,
acknowledges the possible damaging social and psychological effects of long sentences as well as ways of
counteracting them.

73. The concept of evidence based practice (EBP) involves attention to the relevant research literature
including systematic, updated, controlled studies of the effectiveness of a given intervention. It was
expounded initially in the fields of medicine and health care, but is now applied in a range of fields such as
education and criminal justice. In the context of the recommendation, EBP involves reference to the literature
on risk assessment and management and the degree to which they have been scientifically tested and
proven effective in evaluating or reducing offender risk. EBP recognises that assessment and management
should be individualised, subject to change and acknowledge uncertainty.

74. Even though research has been conducted to evaluate some types of risk assessments, much is still
to be done particularly in addressing questions of the effectiveness and accuracy of assessments of
dangerousness.

75. Moreover, documentation on the effectiveness of risk assessment and risk management measures
with dangerous offenders will develop greater understanding of this specific group.
76. This is why the need for an individualised and comprehensive assessment of the characteristics, history and current circumstances of the offender concerned should be upheld to prevent inappropriate decisions. For example, it is important to look at the possible biases that may be inherent in risk assessment tools. They are often developed on the circumstances of the majority of offenders, or on occasions on a particular population, and for this reason may not capture the special conditions of individual offenders. But just as minorities should not be overlooked by these assessment tools, it is equally important to stress that not all offenders belonging to a minority group based on for example ethnicity, gender, or religion are the same just on the basis of their minority status.7

77. Dangerous offenders present a range of challenges and complexities. During imprisonment and post-release stages, it is important that the various types of staff and agencies are well equipped to manage those challenges. Staff dealing with dangerous offenders may encounter more difficult working conditions, and professionals undertaking assessment and delivering measures for treatment and risk reduction require continued training to develop and maintain adequate competency. Adequate resources must be allocated to this kind of training. Some types of risk assessment may require a higher level of competence in staff.

78. Dangerous offenders with a mental disorder are a particularly vulnerable group with specific psychosocial needs, and it is vital that staff are trained in handling and understanding these needs. As stated in Rule 47 of this Commentary, the reference to dangerous offenders with a mental disorder only applies to persons who are under the responsibility of the prison/justice system.

Part II - Judicial decisions for dangerous offenders

General provisions

79. The decision to request risk assessment is the responsibility of the judicial authority. Risk assessment used to inform judicial decision-making should be undertaken by independent experts.

80. This rule establishes the right of the offender to request an expert report on risk assessment other than the one commissioned by the judicial authority. The Recommendation sets this standard of commissioning a separate report as a crucial step towards securing the offender’s rights in the light of the fact that risk assessment reports as well as psychiatric evaluations can come to quite different conclusions. This rule also provides that the judicial authority will have this report in their hands before taking a decision related to offender’s risk assessment.

81. Council of Europe member States have different procedures for judicial decision making regarding conviction and sentencing. In some countries, guilt will be established first, without the aid of pre-sentence reports, and only after the offender has been found guilty will a report guide the judges in the choice of sentencing. In other countries the guilt and sentencing phase are often merged and the judge will pronounce both at the same time, in some cases without the aid of pre-sentence reports.

82. This rule takes into account these differences, but at the same time states that it would be very useful for judges to make use of reports concerning the offender’s personal circumstances, in order to be precise about the assessment of the dangerousness of the offender at the time of sentencing.

Secure preventive detention

83. Secure preventive detention defined as the detention of offenders for the purpose of public protection is a measure which varies considerably between different countries. These variations include countries where secure preventive detention is not allowed and countries where it is foreseen either at the time of sentence, or at the time of release. In some countries a maximum limit has been established while it is indefinite in others. Some countries have already in place a broader catalogues of crimes for which secure preventive detention may be applied.

---

5 Commentary to Recommendation CM/Rec (2010)1 of the Committee of Ministers to member States on the Council of Europe Probation Rules, Rule 4.

6 For a comparison of the subject see: PADFIELD, N., op.cit, note 5, p. 27-29; the Discussion paper on secure preventive detention, Bureau of the European Committee on Crime Problems, 22 February 2010 (CDPC-BU(2010)04rev-e); as well as ECtHR ruling on Rangelov v. Germany, where it is recalled the prohibition of the retroactive application of secure preventive detention.
84. This rule underscores the importance of taking into account risk assessment reports when considering restrictive measures exceeding the ordinary sentence, such as secure preventive detention. Risk assessment reports offer a much deeper picture of the offender’s situation and risk factors than can be obtained in court; judges should be able to draw on these expert conclusions in their decision-making, however without prejudice to judicial independence; the report should not be imposed as binding on judicial authorities.

85. This rule establishes that secure preventive detention should only be possible when the offence committed falls within the definition of dangerousness as defined earlier in the Recommendation. Only offenders who have been convicted of a very serious sexual or very serious violent crime against person(s) and who present a high likelihood of reoffending with further very serious sexual or very serious violent crimes against person(s) should be considered for secure preventive detention. Some countries have already in place a broader catalogue of crimes for which secure preventive detention may be applied.

86. In some countries, offenders are regarded as dangerous solely on the grounds of repeated recidivism, or because they have a long-term or life sentence, even though the crimes committed are not themselves considered dangerous. This rule establishes that neither long-term sentences nor recidivism should in themselves justify the use of secure preventive detention.

87. This rule states that secure preventive detention should be regarded as the “ultima ratio”, i.e. the principle of the last resort when dealing with dangerous offenders. This is in accordance with the general preoccupation of the Recommendation to avoid over-criminalization and over securitizing of offenders assessed as dangerous. Decisions to use secure preventive detention should take into account if secure preventive detention is appropriate and necessary and there are no comparable alternatives, i.e. if the same purposes are not achievable through an ordinary imprisonment penalty under which the offender could be convicted. The principle of proportionality requires that a balance be struck between the requirements of the case and the application of secure preventive detention.

88. The necessity of regular reviews has been established by the ECtHR on several occasions, e.g. the case concerning the non-compliance with the time-limit for review of the necessity of a person’s preventive detention, Schönbrod v. Germany, application no. 48038/06, judgment 24 November 2011, where a violation of Article 5 § 1 was found because of the domestic courts’ non-compliance with the statutory time-limits for review of the necessity of the application’s preventive detention.

89. There are different situations in Council of Europe member States concerning secure preventive detention: some countries impose a fixed sentence proportionate to the offence committed, and secure preventive detention begins after this period. In other countries, secure preventive detention replaces an ordinary sentence. This rule establishes that offenders have the right to challenge their detention, after the fixed term has been served. For the purpose of this rule, “regular intervals” means at least biannually, as stated in Rule 19.

90. This regular review should also be supported by an up-to-date risk-assessment report. The situation of the offender, as well as the risk posed, can change. Outdated reports give an inaccurate basis on which to make decisions about retention or eventual release from secure preventive detention.

91. The compliance of a person’s continued detention because of his or her dangerousness always requires that the domestic courts base their decision to prolong the detention on adequate and sufficiently up-to-date evidence. The right provided in Rule 22 should also be applicable in this case.

92. Offenders held in secure preventive detention should be afforded reasonable opportunity to reduce the level of risk that they pose and that causes them to be held in detention. This can be achieved, notwithstanding the more procedural challenges to the decisions on their detention, by giving them the opportunity to address and possibly ameliorate specific risk factors, such as by undergoing treatment for personality, sexual or development disorders. Offenders should, as far as possible, have access to this kind of treatment, and its planning and progression should be fully accessible to the offender.

---

8 See for instance the case law extract from Dörr v. Germany (dec.), no. 2894/08, 22 January 2013.
93. Imposing the least restrictive measures on the offender should be balanced against the assessment of risk to the public. It thus lies at the heart of the Recommendation to address both aspects, as is also explained under the Terms of Reference of the PC-GR-DD.

94. When dangerous offenders are held in detention beyond their ordinary sentence due to the assessed risk they may pose to the public in the future, their detention conditions should be tolerable and if possible they should be held in better conditions than in ordinary prisons. Reference is made particularly to ECHR case law, M v Germany, application no. 19359/04, judgment of 17 December 2009, which stated that there had been a violation of Art. 7 § 1, partly due to the fact that the offender had been detained in an ordinary prison beyond the period of sentence, with no substantial difference between the execution of prison sentence and that of a preventive detention order. Therefore, the Court could not subscribe to the German Government’s argument that preventive detention served a purely preventive, and no punitive, purpose.

95. The term “appropriated” refers, among other situations, to elderly dangerous offenders who will probably not need “top security” prison conditions. Therefore, in each case, the conditions offered to offenders should be responsive to their individual needs and risk behaviour, which may differ markedly from offender to offender.

**Preventive supervision**

96. The Recommendation acknowledges that not all countries have preventive supervision, and this will not be imposed on them.

97. In Recommendation Rec(2000)22 of the Committee of Ministers to member States on improving the implementation of the European rules on community sanctions and measures, Rule 5 made it possible to allow for indeterminate supervision in the community. This could be of great relevance for dangerous offenders, especially where this is the only safe way for the offender to achieve release. It can thus replace detention if it is properly assessed that the risk can be managed in the community.

98. A regular review of the appropriateness of the preventive supervision imposed should be introduced.

99. With the aim of protecting citizens against potentially dangerous offenders after their release, different kinds of supervision measures may be taken into consideration according to the specific risks and needs of the offender. These can include surveillance by, e.g. law enforcement officials, follow-up by social workers, regular meetings with staff, and multi-agency supervision with a combination of all these. An additional possibility is electronic monitoring or GPS satellite tracking. Whenever using these measures, priority should be given to those offenders considered critically dangerous and should not be a common measure to any kind of violent offender. The released person should not be subject to intense surveillance without good reason. There is also an economic aspect: the often scarce resources within the criminal system must be carefully targeted.

100. The rule mentions a number of measures but it should be stressed that these measures are not listed in a specific order to be followed. The measures required in each case may vary according to the specific circumstances pertaining to each offence. Rule 25 xi) leaves open the possibility of applying other measures than are listed in this rule, as long as they are provided for under national law.

101. The rule mentions a number of measures aimed at the prohibition of certain activities and actions, but also measures aimed at the participation in supportive and constructive activities. This motivating aspect of supervision is just as important as restrictive and controlling measures, since the rehabilitation of the offender is crucial for the reduction of the risk of reoffending. Focusing on personal strengths and aspirations also implies a positive collaboration with the offender, wherever possible.
102. Points v) and vi) mention the prohibition of going to or residing in certain places. This means restricting where offenders can go or live. Examples may be a certain distance from places such as the area of residence or work of the victim(s) and/or their families, schools, playgrounds, or parks. However, studies suggest that, for example, sexual recidivism is more likely to result from a pre-existing relationship between the sexual offender and the victim rather than residential proximity to schools. Therefore, the effectiveness of residence restrictions in reducing sex offender recidivism should be balanced against the possible detrimental effects of prohibition of residence, like alienation from family members and the supportive social network of the offender.

103. Electronic surveillance is increasingly being used on offenders after release in many member States. It includes a range of different monitoring possibilities from GPS to voice recognition. The potential of being able to follow a released dangerous offender and prevent him or her from seeking out certain places or persons may constitute a relevant purpose for using these instruments. However, neither the efficacy of using electronic monitoring nor the consequences for the released person's privacy have been fully documented. This is also due to the fact that electronic monitoring is not a single kind of measure, making it difficult to evaluate its impact. GPS and other electronic monitoring should be used with constraint and always together with other face-to-face rehabilitation measures undertaken by social workers. Client-supervisor continuity in this context is crucial; research has shown more positive results when the offender establishes a stable relationship of trust with one specific supervisor.

104. Since the measures can be manifold, it is also important that there is one co-ordinator and responsible person for the overall plan.

105. Electronic monitoring of any kind makes an impact on offenders' lives in many ways, and imposes different kinds of restrictions and intrusiveness on both the offender and immediate family or relatives. This also raises the question of recording, confidentiality and protection of data, since electronic monitoring may not only record the whereabouts of the offender, but also other people. These records must be subject to principles of confidentiality and data protection as set out in national law and as stated in the Recommendation CM/Rec(2010)1 of the Committee of Ministers to member States on the Council of Europe Probation Rules, Rule 89.

106. Additionally, the use of electronic monitoring could give a false sense of high protection of other citizens from the offender. Proportionality between the level of monitoring, the rights of the offender, the security of the public and the use of economic resources should be striven towards and also be guided by the commentaries on Rules 57 and 58 of the CM/Recommendation Rec(2010)1 on the Council of Europe Probation Rules.

107. The amendment of Rule 5 of the Recommendation Rec(2000)22 on improving the implementation of the European Rules on community sanctions and measures allowed for the imposition of indeterminate community sanctions or measures, reserved for offenders convicted for serious offences and with risk of serious reoffending posing a grave threat to the community. These requirements underline the exceptional situations in which indeterminate measures may be applied. Other guarantees for a just application comprise legislative provision for a regular review of this kind of sanction by an independent body and under the conditions laid down in law. This body should review any decision to impose indeterminate supervision and also be empowered to order its cessation when circumstances allow for it.

**Part III - Risk assessment principle**

108. This part of the Recommendation concerns risk assessment undertaken during the implementation of a sentence. It thus has a slightly different scope and a different temporal dimension from the risk assessment reports cited in Rule 13 that are used specifically in judicial decisions before the judgment. This part concerns risk assessments that are dynamic and responsive to change during the execution of the sentence.

---

109. This rule acknowledges as stated elsewhere in this recommendation that the identification of individuals as dangerous, involves great human rights concern, both in terms of liberty and safety. Therefore, those assessments that guide sentencing or imposition of such a classification should be detailed and comprehensive. Furthermore, the assessment should be sufficiently solid to support defensible decision-making and demonstrate that risks have been identified and managed.

110. A balance between the level of risk and the level of assessment of the individual offender should be kept by taking into consideration the protection of the public, the high risk of perpetrating further very serious sexual or a very serious violent crime against person(s) and the gravity of the measures that could be taken against the offender. It is also worthy to recall that very thorough assessment may take many weeks and should be reserved for appropriate cases as defined narrowly under Part I of the Recommendation on the term “dangerous offender”.

111. However, it does not follow from the rule that the higher the risk emanating from a person, the more in-depth-examination of that person is necessary. The thoroughness of the assessment of a person’s dangerousness in relation to the level of risk must be decided upon on a case-to-case basis.

112. This rule emphasises the importance of basing assessments on a broad range of reliable information gathered from a variety of sources such as the use of interviews (of the offender and, where possible and appropriate, the offender’s social support/family), communication with other professionals who have knowledge of the individual, criminal records and other official records, video recordings etc. This kind of information exchange should be guided by CM(2010)1 on the Council of Europe probation rules, rule 89, underlining that a high risk of serious harm can allow for information sharing between various agencies, although confidentiality must be respected as far as possible.

113. It is the experience of professionals working in the area of risk assessment of offenders that many important aspects of the individual offender are not properly circulated between different types of staff, or taken into consideration when assessing and managing risk. Therefore, information gathering should identify characteristics of the offence, the individual and his or her circumstances as appropriate to the individual case. Such information may include, but is not limited to:

- childhood;
- sexual history (if appropriate to the offence committed);
- employment background;
- personality;
- mental history;
- social context background;
- substance misuse;
- strengths or protective factors;
- mental health treatments;
- offences committed and subsequent behaviour;
- modus operandi;
- criminal record, in particular convictions of a very serious sexual or very serious violent crime against person(s);
- previous interventions to reduce reoffending risk and the response to them.

114. An explanation for the onset and continuation of violent behaviour should be developed, with an opinion as to the likelihood and circumstances, nature and seriousness of further violent behaviour.

115. For risk assessments to be based on the best available information it is necessary that they are updated regularly; good information-sharing and communication between staff and agencies are important to achieve this.

116. In any case, outdated risk assessment reports should not be used to inform sentencing.
117. Risk assessment tools are used to ensure that assessments are grounded in empirical knowledge about the factors that have been shown to be associated with offending. Most European countries use clinical assessments of dangerous offenders, although actuarial risk predictors are becoming more widespread. The process of risk assessment has developed through several stages, from the first generation of assessments with unstructured clinical individual judgments, to second generation assessments that involved actuarial methods based on a limited range of demographic, offence and criminal history factors; to a third generation of assessments that incorporates both clinical and actuarial techniques. Therefore the Recommendation uses the term “risk assessment” more broadly without defining one particular approach. This is also due to the fact that different types of assessments have limitations as well as advantages and should be used in combination in order to achieve the most accurate result.

118. Clinical assessments are typically carried out by psychiatrists or/and psychologists, and the assessment is often made on the background of lengthy interviews with the offender. While this is a very thorough assessment, it can also be wrought with subjectivity on the part of the professional. Clinical assessments offer flexibility in the handling of, and deep individual knowledge of, the particular offender, but have been criticized for not ensuring the exclusion of subjectivity in the evaluation by the professional: the individual psychiatrist/psychologist makes his or her own conclusions, and therefore there is a risk that there may be inconsistency between different assessments of the same offender.

119. Actuarial assessments are probability based on diagnostic tools and are perceived to be more devoid of these biases, but often do not address the individual and dynamic situation of offenders. Information considered in the actuarial assessment process is drawn from an institutional report and case files and personal interviews, and typically includes the offender’s age, education level, and employment status and known or suspected mental disabilities, in addition to the individual's criminal history. Actuarial risk predictors may take into account dynamic factors such as social, personal or economic factors, that could be (or not) relevant to the offender’s personal situation.

120. Actuarial tools contribute because they offer more objectivity, reliability and validity as well as transparency; but at the same time, they suffer from problems related to the impossibility of generalizing cases/offenders, they do not offer flexibility as to what to focus on in the offender, and generally, they often put weight on static factors that run the risk of producing automated assessments, although newer generation actuarial tools include dynamic factors. Dynamic factors are important because they may take into account that the offenders’ situation may eventually change over time.

121. Brief actuarial tools based on static factors give a statistical estimate for a particular group of offenders: they should not be relied upon to communicate the risk posed by an individual; nor can they guide interventions.

122. A combination of different approaches can promote systematization and consistency, and still be flexible enough to take into account the diversity of offenders.

123. Risk assessment tools thus offer a range of possible resources to assist the evaluation of risk and needs. However, it is important that these tools be used with awareness of their appropriate application, respective strengths and limitations. For example, many risk tools have been developed in North America, and not all are adapted to local conditions in Council of Europe member States. Care is needed in the interpretation and communication of a tool’s findings. Risk assessment tools should be validated for the various jurisdictions in which they are applied, and evaluated for their validity and utility, for example by establishing a detailed directory of assessment tools.

124. Such instruments should be used in the context of a comprehensive and individualised assessment, taking into account the individual offender’s social circumstances, personal characteristics and specific risk/need factors.

---

10 PADFIELD, Nicola, op.cit, p. 8.
125. Risk assessment tools should only be used by staff or professionals who have been properly trained in their administration and used for the purposes for which they were designed. Regardless of the different ways in which Council of Europe member States have chosen to employ such tools, it is important that staff are well trained in using them as well as understanding their limitations (See also CM/Rec(2010)1 of the Committee of Ministers to member States on the Council of Europe probation rules, rule 71).

126. Assessment should not only involve consideration of issues of risk and need, but also responsiveness and resources. In addition to its focus on risk (of re-offense), it takes into account the offender’s own strengths. This means that the offender’s potential and abilities are also recognised.

127. Assessment tools can be used to identify the risks and needs that should be taken into account in the management of the individual offender. They should be used to identify the interventions which are necessary to reduce risk and encourage rehabilitation of the offender.

128. While different kinds of risk assessment tools may contribute to the identification of risk levels in offenders, they should not in themselves be used to justify detention or longer sentences.

129. Recommendations for restrictions and interventions imposed on the offender based on specific risk assessment procedures should acknowledge the uncertainties about the risk assessment method.

130. This rule establishes that it is crucial to understand assessment of risk and needs as a continuing process. The assessment should be repeated periodically to make sure that it is still relevant in relation to the offender and his or her current situation. Assessment and management practices should be responsive to change, alert to increasing risk and acknowledge positive change with regard to risk factors. Emphasis in this reassessment process is therefore placed on the dynamic risk factors.

131. Specialised staff should have access to the conclusions of these repeated risk assessments in order to be able to respond appropriately to the offender’s risk level. Further develop rule 17a), in particular as regards the awareness by the staff of the conclusions.

132. This rule stresses that assessment should be understood from a dynamic perspective since dangerous offenders may change their attitude to their previous crimes and/or to their behaviour in relation to reoffending. Both in custodial and non-custodial settings, risk assessment should be followed up by interventions to enable offenders to address their identified risks and needs. This also entails that risk assessment and risk management plans are interrelated processes, as addressed in the Recommendation’s Part IV on Risk Management.

133. Involvement in this context means that the offender should be informed of the purpose of the assessment, its procedures and the consequences of it. Not all offenders may be willing to engage in the process, but full attempts should be made to ensure this kind of involvement. Even though the offender may be allowed to contribute his or her own views, the content and conclusions of the assessment are decided by the staff.

134. Offenders should be given feedback on the conclusions of the assessments leading to their current detention. This may facilitate engagement, and build awareness of specific risk factors or clinical symptoms.

135. This rule establishes that there may be a great difference between representing a risk to the public while at liberty, and behaving dangerously inside prison. Risk should be evaluated for the relevant context: the risk posed by an individual’s violent offending changes with the context: some offenders who present a risk of serious harm in the community do not pose management or security problems when in custody; others may pose similar or distinct risks in the secure setting. Some dangerous offenders who have committed serious offences do not necessarily present a danger to other prisoners or staff; however, others do. Therefore, the level of security required in prison must be established on a case-by-case basis.
136. Recommendation No. R(82)17 of the Committee of Ministers to member States concerning the custody and treatment of dangerous prisoners addresses dangerousness both inside prisons and to the outside community, and Recommendation Rec(2003)23 of the Committee of Ministers to member States on the management by prison administrations of life-sentence and other long-term prisoners, Rule 6, also makes this distinction.

Part IV - Risk management

137. The Recommendation Rec(2003)23 of the Committee of Ministers to member States on the management by prison administrations of life-sentence and other long-term prisoners (Rules 33 and 34) addresses important issues about continuity between pre-release and post-release plans. This is particularly important when considering the rehabilitation and reintegration of dangerous offenders and should be regarded as a continuous process beginning in detention and being closely followed up after eventual release. The most efficient measures for the prevention of reoffending are often seen as taking place during imprisonment.

138. This rule stresses that risk assessments, as well as the measures aimed at reducing risk of reoffending delivered in prison, and the subsequent delivery of these interventions after release are seen being part of one planned process. Assessment must be undertaken at regular intervals to ensure that its conclusions are accurate and up to date.

139. Therefore, risk management should be inextricably linked to risk assessment, and any change in risk assessment should be reflected in the risk management plans.

140. A range of interventions is needed to manage dangerous offenders in a number of ways, which may consist of both rehabilitative and restrictive measures.

141. Monitoring as described in Part II, Rule 25, aims to determine compliance with restrictions or changes in behaviour, and identify current or future risk to others.

142. Interventions such as rehabilitation programmes include a range of social, educational, health, cultural and environmental measures which help to reduce the risk factors of offending and victimisation.

143. These should include programmes aimed at addressing offending behaviour, but also health issues, schooling, vocational education and work skills training inside prisons will be indispensable as a means of practical support. At the time of release, it is important that these measures be followed up by support from relevant authorities in finding employment, housing and other practical support. Some of the best measures for preventing re-offence may in fact be of a social kind. Providing working conditions, adequate housing and social networks is essential for the success of the post-release period. It is also vital that treatment which has been undertaken during imprisonment is continued or at least followed up after release.

144. Apart from the already mentioned education and work training, a range of different treatment programmes aimed at reducing risk of reoffending exist and are being used on many kinds of offenders in member States. What makes it particularly difficult to establish the success of these programmes specifically on offenders identified as dangerous is due to the fact that this group is likely to be very small. Cognitive behavioural programmes are one central measure being used to identify and modify behaviour. They may include anger management programmes aimed at preventing reactive violence, sex offender treatment programmes, and improvement of social skills. Programmes aimed at psychopathic disorders are even less documented as to their effectiveness, but could be a treatment choice in some instances. Because of the scarce knowledge about what actually works on this small but diverse group of dangerous offenders, it is important to evaluate on a case-to-case basis the impact of the treatment measures used (Padfield 2010:21-22). The specialised nature of these programmes makes it essential that staff implementing them are well-trained in their use.

---

A risk management plan should strike a balance between rehabilitative and restrictive measures, taking into account aspects of the case for example the offender’s motivation, engagement, or resistance, and the level of risk in the current context. The plan should equally take into account the resources, strengths and abilities of the offender as stated in the assessment. Focusing on these resources may be an effective way of rehabilitating offenders instead of focusing only on the offender’s deficits or risks of reoffending. Offenders can be strongly motivated by such a strength-based approach.

In the process of case-management and supervision, a relationship with a key individual will help to promote compliance, engagement and change. Stability and continuity in this relationship are seen as pre-requisites for successful risk management and rehabilitation of the offender. It is also important that adequate resources are allocated to this process. Staff delivering interventions and/or undertaking the case management role should be trained and competent in the relationship and structuring skills that are associated with reduced reoffending.

The Recommendation acknowledges that even though the assessment has been conducted and risk factors identified, there may not always be a relevant intervention available to minimise risk.

As mentioned before, reintegration can only be successful if there is a thorough co-operation between prison administration, probation workers, social and medical services and law enforcement authorities. This may help identify the interventions necessary on a case-to-case basis. Offenders may have variety of needs that must be addressed by a range of professionals. This diversity of expertise further calls for good co-ordination and communication with an exchange of information between relevant authorities, as also stated in Rule 183 of the Commentary. Of particular importance is the exchange of information about changes in circumstances, failures to comply, the emergence of interventions that may have failed, as well as the possible reasons for this failure.

Efforts should be made to diminish troubles about missing information, misunderstandings and/or the absence of appropriate reactions to the level of risk that can arise when different agencies and types of staff have to co-operate. It is a common experience that reoffending takes place particularly when relevant information has not been shared or reacted properly on by relevant parties.

The Recommendation acknowledges that such co-operation and exchange of information should take place only in accordance with respective data protection rules. It also acknowledges that such co-operation can prove difficult particularly in the case of foreign prisoners. The handling of dangerous offenders that are foreign prisoners should be guided by CM/Rec(2012)12 of the Committee of Ministers to member States concerning foreign prisoners.

The continuation of programmes, interventions or treatment undertaken by offenders during imprisonment should always be considered as part of this co-operation. The continuation of such interventions can contribute to diminishing risk of reoffending by the released as well as maintaining any personal progress made in prison.

Dangerous offenders are often facing indeterminate detention and therefore have no fixed release date. This fact makes it particularly important that their risk management plans are accessible to them as far as possible, that they understand the purpose of the plans and that the goals described in the plans can be achieved by them.

Plans should be tailored to the needs of the individual offender and delivered in ways that are known to be most effective, in a manner that recognises the individual’s cognitive ability, age, gender, mental disorder, and readiness to change.

The objectives should be clear and measurable, so that progress can be reviewed by both staff and the offender. It is particularly important that the offender receives achievable and concrete goals that can be reached step by step.
155. Offenders’ circumstances may change both during custodial and community intervention, and risk management plans should be reviewed accordingly at suitable intervals to register if some development has been achieved, or important changes have occurred, or if circumstances deteriorate and risk escalates. As mentioned before, risk assessment and management are seen as interrelated. Just like the assessments on the risk posed by the offender should be regularly revised, so the process of risk management should adjust to these on-going assessments. Rather than providing specific timescales for this revision, the Recommendation CM/Rec (2010)1 of the Committee of Ministers to member States on the Council of Europe Probation Rules, Rules 69-70, address in what particular situations assessment should be reviewed, e.g., significant changes in the offender’s life. This approach is also promoted in the present Recommendation.

156. This Recommendation makes specific reference to Recommendation Rec (2010)1 on the Council of Europe Probation Rules and Recommendation Rec (2000) 22 on achieving a more effective use of the community sanctions and measures. These recommendations set principles concerning central issues such as organisation and staff; specialist staff dealing with particular kinds of offences, offending behaviour and difficulties; probation work and processes of supervision; effective programmes and interventions; and recording of information and confidentiality issues.

157. These issues are covered for all kinds of offenders, and thus also guide the Recommendation on dangerous offenders.

Part V - Treatment and conditions of imprisonment of dangerous offenders

Conditions of imprisonment

158. Even though all prisoners face the deprivation of liberty, this may especially be the case for offenders classified as dangerous, since they will not always be given a specific release date and may be held in special conditions. To make this as tolerable as possible, the conditions of imprisonment should be managed with special care and attention, and any restrictions imposed on dangerous offenders should follow proportionality principles, as addressed in Recommendation Rec(2006)2 on the European Prison Rules.

159. This rule addresses the problem that dangerous offenders are sometimes treated with very high security measures and maybe even segregated solely on the grounds of the offence committed. However, it should not automatically follow that offenders considered dangerous to the outside community are in need of special safety levels inside prison. The risk an offender poses inside the prison should be carefully examined in each case. Dangerous offenders should not automatically be held in high security conditions.

160. It should also be considered that this kind of dangerousness can change over time and should not be regarded as a static risk. Therefore, if the offender is in need of special security measures, these should regularly be revised so that security measures are upheld only as long as strictly necessary.

161. Recommendation Rec(2006)2 on the European Prison Rules, Rules 51-68, describes what kinds of security measures can be used, as well as restrictions on their use. The use of instruments of restraint (e.g., handcuffs, restraint jackets, other body restraints, the use of chains and irons) shall be exceptional and only when strictly necessary and the manner of their use shall be prescribed by law (Rule 68, European Prison Rules).

162. Special security measures taken against dangerous offenders, such as solitary confinement (see, for instance, the "Carlos" case, Ramírez Sánchez v. France, application no. 59450/00, §§ 86 ss., judgment 4 July 2006), or strip searches (see, for instance, Frérot v. France, application no. 70204/01, §§ 25 ss., judgment 12 June 2007), may breach the prohibition of inhuman and degrading treatment under Article 3 of the ECHR. Any use of such measures should be for as short a duration as possible and be reviewed frequently.
Treatment

163. Where an individual's liberty is restricted for reasons of public protection a sentence plan based on a comprehensive assessment promotes legitimacy, transparency and accountability.

164. The personal circumstances of the offender should be systematically collected after admission to an institution. In light of the importance of social and familial ties for the successful integration into society, dangerous offenders should, whenever possible, be placed in an institution as close as possible to their family. In addition, every effort should be made to facilitate and maintain the offender's relation to relatives, and to provide them with the appropriate welfare support to do so. See also Recommendation Rec(2003)23 on management by Prison Administrations of life-sentence and other long-term prisoners, Rule 22.

165. Offenders should also have access to treatment plans with achievable targets that are aimed at reducing risk of reoffending, raising the general well-being of the offender, and preparing for reintegration into society. Plans should include work, education, social, medical and psychological care according to the individual situation and needs of the offender. A sentence plan should take into account these issues, and the establishment as well as review of these plans should involve the offender as far as possible.

166. There should be clear procedures for establishing and regularly reviewing these plans, and supervision of these plans should be on a yearly basis by the competent authority or as requested by the offender.

167. Treatment should be understood in a broad sense and may include medical, psychological and social care. This range of treatment possibilities are aimed at maintaining the health of offenders as well as encouraging future reintegration into society. Treatment therefore does not necessarily link to risk management purposes, although it can be an aspect of it. Some offenders may be seen as posing a risk for a long time; in this context, treatment should address other factors/goals than reducing risk, namely the well-being of the offender.

168. Treatment should be based on informed consent from the offender, as well as other principles and rights as included in Convention for the protection of Human Rights and Dignity of the Human Being with regard to the Application of Biology and Medicine: Convention on Human Rights and Biomedicine, CETS No. 164 (Oviedo Convention). Although recently, the Parliamentary Assembly of the Council of Europe (PACE) stated that "coerced, non-reversible sterilisations and castrations constitute grave violations of human rights and human dignity, and cannot be accepted in Council of Europe member States", the PC-GR-DD decided not to develop the castration issue further due to very divergent views in member States on this issue.

169. Offenders with a mental disorder are particularly vulnerable as a sub-group of dangerous offenders and steps should be taken to offer them the best conditions possible. These offenders should have access to adequate treatment by doctors and/or psychiatrists, and appropriate therapeutic treatment and psychiatric monitoring should be available. Recommendation No. R (98) 7 in particular gives guidelines to health care in prison, and Recommendation Rec(2006)2 on the European Prison Rules, Rule 47, addresses the mental health of prisoners.

170. Even though dangerous offenders are sometimes seen as posing indeterminate risk, it is important to underline that reintegration into society of any offender is central to every criminal justice system. In this light, the preparation for re-socialisation of dangerous offenders should take its point of departure in access to education possibilities, vocational training and other measures aimed at enhancing the offender's opportunities to lead a normal life. It is a measure for the prevention of reoffending, because it provides the offender with vocational skills, and tools for modifying behaviour, which are all indispensable for a future life in society.

---

12 Addendum VI to CDPC(82)17, appendix III.
13 Resolution 1945 (2013) of the PACE, Putting an end to coerced sterilisations and castrations, adopted by the PACE on 26 June 2013 (24th Sitting).
171. Some dangerous offenders face an indefinite detention sentence and are under extreme stress because of the lack of a final release date. Some offenders may spend most of their natural lives in prison. With this in mind, it is important that treatment programmes try to give them some opportunities for development, both personally and regarding competences in work, education etc. Treatment should seek to sustain the offender’s health, personality and integrity.

Work, education and other meaningful activities

172. This rule considers that dangerous offenders in secure preventive detention should have access to meaningful activities, regardless of their situation and the risk they pose. In addition, they may be allowed to access work and education as long as it is in accordance with security levels for other inmates and staff. It establishes that dangerous offenders should not be barred from work, education and other meaningful activities inside prison just because of the risk they pose in other contexts.

173. Given that some offenders may also be considered dangerous within the prison, precautions should be taken to strike a balance between the desired level of work participation and the security in prison. Recommendation Rec (2006)2 on the European Prison Rules and Recommendation No. R (82) 17 address these issues.

174. Recommendation Rec(2006)2, Rule 26 establishes general conditions for work in prisons, including provisions that work should not be used as punishment or otherwise exploited; and provisions for health and safety, working hours and wages, in conformity with those in society as a whole.

Vulnerable people

175. Even though the Recommendation does not address the issue of children, special importance should be attached to young adult offenders, since their life situation may be different from more mature offenders, and should be guided by Recommendation Rec(2006)2 on the European Prison Rules, Rule 28.3. Young dangerous offenders may not have finished any basic education or vocational training. They may be subject to detention for many years of their productive life without possibilities of further work experience, and special measures should be taken to give them the best possible training and education, which may include specialised education if their personal development requires it. This could help young prisoners’ self-esteem during imprisonment, and make them better able to find employment afterwards.

176. Elderly offenders should have access to relevant regimes of activities taking into account their particular situation, needs and special demands on health care. Activities should be adapted to their capabilities and aimed at maintaining their physical and psychological well-being. Elderly prisoners not able to work should be offered other activities.

Part VI - Monitoring, staff and research

177. This rule underscores the importance of independent monitoring of assessment procedures and treatment of dangerous offenders.

178. Government inspection should be used as a positive tool to ensure acceptable standards for both staff and inmates. It is a supporting tool aimed at heightening the quality of interventions, treatment and work conditions.

179. It pays attention to the possibility that these staff and agencies are at risk of remaining isolated from the on-going societal development of values and practices.

180. Staff (e.g. prison workers, mental health professionals, social and medical workers) dealing with the assessment of dangerousness and treatment of dangerous offenders should be held accountable to the competent authorities. Monitoring authorities should be independent and have an adequate level of resourcing as well as qualified staff to undertake the monitoring tasks.
181. Monitoring should not focus only on individual performance, but consider the resources available to staff, their training, and the adequacy of both administrative and professional work systems concerning dangerous offenders. This is particularly important when dealing with dangerous offenders in secure preventive detention.

182. Reports issued by monitoring bodies should be open to the public and forwarded to relevant international bodies such as the CPT.

183. The Recommendation Rec (2003)23 on the management by prison administrations of life-sentence and other long-term prisoners addresses some aspects of recruitment and training of staff (Rule 37, a, b and c). However, dealing with dangerous offenders implies a continuing evaluation of the dangerousness posed by the individual offender; the professional competence in assessing risk as well as securing as good conditions as possible while in detention is fundamental. Because of the special needs and situation of dangerous offenders, basic prison staff dealing with these offenders, as well as specialist staff engaged in professional assessment of dangerousness, should receive training and follow-up to this training at regular intervals. Training should be linked to their specific work tasks and aimed at developing competences appropriate to their role. This training should be assessed to verify the quality of the competences acquired.

184. Relevant authorities, agencies, professionals and associations could benefit from training in human rights issues.

185. Offenders suffering from a mental disorder are a particularly vulnerable group within the prison regime, and one way of securing good treatment and conditions for this group is related to staff trained in proper practical, medical and ethical tackling of these issues.

186. The rule establishes the need for selection of appropriately trained staff. The institutions should have clear policies regarding recruitment and selection of staff, especially with regard to what kinds of educational and personal qualities are required. Different staff will have different roles to play in relation to dangerous offenders, and therefore, different levels of education and training will be of relevance. As mentioned earlier in the explanatory report, a necessary scientific level should be required for staff dealing with assessment of risk posed by offenders.

187. When dealing with dangerous offenders who are facing release it is vital that cooperation between multiple agencies is in place and well-functioning. In order to handle both public safety and the offender’s reintegration into society, many different kinds of professionals will have to work together. This rule aims at securing and obliging exchange of knowledge about best practice in this process. The Recommendation encourages mutual learning between prison and probation or post-release staff.

188. An example can be drawn from the United Kingdom, where identification of offenders requiring such monitoring and information sharing and regular meetings between all relevant agencies is provided, such as prisons, police, local authorities, probation staff and health services.

189. It is important to monitor the tests which qualify an offender as dangerous. No assessments are neutral or objective, and their implementation and conclusions should be researched and followed closely. As mentioned earlier, there is uncertainty about the qualities and effectiveness of the different risk assessment tools and approaches. Assessment tools will need continued research on how they work, and developments of new assessment methods should be taken into account. Improved knowledge about the use of these tools to specifically assess dangerousness could lead to a more precise identification of dangerous offenders.

190. In addition, research should be focused on the needs of the offender in the light of the negative effects of the often long-term imprisonment, he or she is facing.
191. The Recommendation also calls for research into the risk assessment. Systematic research should be further developed by independent bodies, particularly universities. This requires that sufficient resources are allocated to support research on improving assessment, management and intervention practices. It should be guided by the evidence of effectiveness of anticipating and reducing re-offence, as well as improving the post-release period in the community. It should be guided by principles of effectiveness, revision, and independence.

192. Special attention should be given to the uncertainties in calculating the probability of re-offense. A problem facing this evaluation in relation to dangerous offenders is their proportionally small number, which makes it particularly difficult to systematically assess “what works”. One way of countering these difficulties on a national basis is to compare with other countries. Especially North America and England have conducted research into risk assessment tools. However, precaution should be given to the local/national context of assessment practices. Risk assessment tools and research may not always translate smoothly from one national context to another.

193. Research on the role of expert staff in assessing dangerousness should also be commissioned. Experts often act as gate-keepers, because judges and other authorities (penal administrators) will heavily depend on reports and conclusions from the expert when deciding on specific measures for the treatment, conditions and eventual release of a dangerous offender. Recent concern has been voiced that people entitled experts may not always be suitably equipped to predict dangerousness or risk of reoffending.

Part VII- Follow-up

194. It was decided that the CDPC should ensure the follow-up of the Recommendation. This would imply:

a. playing a role in the effective implementation of the Recommendation, by making proposals to facilitate or improve the effective use and implementation of it, including the identification of any problems and the effects of any declarations made under this recommendation;

b. playing a general advisory role in respect of the Recommendation by expressing an opinion on any question concerning the application of it;

c. serving as a clearing house and facilitating the exchange of information on significant legal, policy or technological developments in relation to the application of the provisions of the Recommendation;

d. setting up and establishing, if necessary, any other measures – including the setting up of a specific group of experts – that it would deem necessary to facilitate the implementation of the Recommendation.

195. The rule also encourages sharing of research and best practices between countries in order to raise the standards at a national level.
